

Non-biting midges occur naturally in the aquatic environment. These midges do not bite or spread diseases although they could cause nuisance when present in large numbers. PUB is actively monitoring and managing midge populations at Pandan Reservoir and Bedok Reservoir through mitigating measures that control the midge population at various stages of its life cycle. The fogging schedule at the reservoirs is planned to coincide with the emergence period of the midges in the morning and/or evening. Residents and Park users are advised to plan their visits accordingly.

For any queries on the fogging schedule, please contact us at <https://www.pub.gov.sg/contact> or 1800 2255 782
