

## Userguide for Amphiro Device App

**Step 1:** Download “Amphiro b1 connect” App at Apple’s App Store or at Google’s play store.

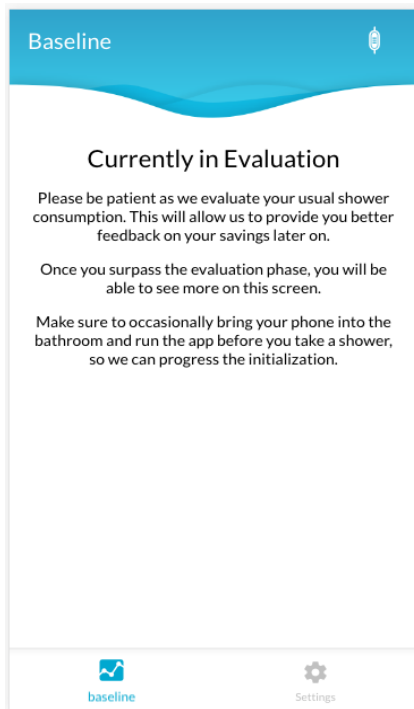

**Step 2:** To connect to the smart shower device, turn on Bluetooth on your smartphone, open up the app and **stand less than 3 meters** from the device.

**Step 2a:** Once connected, you will see the following screen on the app.

**Step 3:** Start to use the smart shower device and you will enter a baseline phase **during the first 50 showers** for the device to familiarise itself with your shower usage pattern.

During this period, only temperature will be shown on the device's display panel.

**Step 4:** After baseline phase ends **which typically will take about 2 weeks**, the device will return to its normal functionality and start to display your shower usage.

**Step 5:** You can log in to the app again to customise your goals. Go to the “Goal” page of the app from the home page, stay close to the device, turn on water supply and click on “Customise Goal”,

**Step 5a:** Set your new goals by sliding right for a higher target and left for a lower target. Then, click on “Set New Goal”.

The recommended goal setting is at 15 litres per shower.

**Step 5b:** You can also view and track your past water consumption via the “Consumption” tab from the home page on the app.

**Step 5c (Final):** Set reminders to sync the shower data stored in the device to the app every 2 weeks to avoid losing them. The smart shower devices can currently store your shower data for up to 250 showers only.
